Excellent Patient Care

The right personal protective apparel is crucial to excellent patient care. This yellow, fluid resistant, isolation gown keeps your patient and staff safe with a high, round neckline paired with long, raglan sleeves that feature knit cuffs. The relaxed-fit, isolation gown is composed of a 99% Polyester/1% Carbon that is fluid resistant to ensure your patients are clean and comfortable during their stay.

HOW THE PROGRAM WORKS

1

Scheduled arrival of freshly laundered, hygienically cleaned, and poly-wrapped bundles of gowns assigned to your facility.

2

Our Route Service Rep will check-in, ensure inventory levels and service needs are being met, and pick up the used gowns to be washed.

3

Once back at our HLAC Accredited plant, all gowns are scanned in using our proprietary RFID technology.

4

All iso-gowns are washed and dried in a specific EcoLab formula, ensuring all items are disinfected to the highest industry standards.

5

Once gowns are ready to be folded, they are scanned again, ensuring they are within their useful life. Once gown has reached its manufactured recommended useful life, they are pulled from circulation and replaced free of charge.

6

Gowns are then assigned and checked out to your account, and given a packing slip ensuring accurate deliveries.

7

The gowns are then poly-wrapped and prepped for your next delivery.
